

## Project Design Phase - II

### Solution Requirements (Functional & Non-functional)

|               |                                                             |
|---------------|-------------------------------------------------------------|
| Date          | 16 October 2022                                             |
| Team ID       | PNT2022TMID15957                                            |
| Project Name  | REAL TIME RIVER WATER QUALITY MONITORING AND CONTROL SYSTEM |
| Maximum Marks | 4 Marks                                                     |

#### Functional Requirements:

Following are the functional requirements of the proposed solution.

| FR No. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task)                                     |
|--------|-------------------------------|------------------------------------------------------------------------|
| FR-1   | User Registration             | Registration through Gmail                                             |
| FR-2   | User Confirmation             | Confirmation via Email<br>Confirmation via OTP                         |
| FR-3   | Log in to system              | Check Credentials Check<br>Roles of Access.                            |
| FR-4   | Manage Modules                | Manage System Admins<br>Manage Roles of User<br>Manage User permission |
| FR-5   | Check whether details         | Temperature details<br>Humidity details                                |
| FR-6   | Log out                       | Exit                                                                   |

#### Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

| FR No. | Non-Functional Requirement | Description                                                                                                                                                               |
|--------|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NFR-1  | <b>Usability</b>           | Usability includes easy learn ability, efficiency in use, remember ability, lack of errors in operation and subjective pleasure.                                          |
| NFR-2  | <b>Security</b>            | Sensitive and private data must be protected from their production until the decision-making and storage stages.                                                          |
| NFR-3  | <b>Reliability</b>         | The shared protection achieves a better trade-off between costs and reliability.<br>The model uses dedicated and shared protection schemes to avoid farm service outages. |

|       |                     |                                                                                                                                                                                                                                                           |
|-------|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NFR-4 | <b>Performance</b>  | The idea of implementing integrated sensors with water quality management involved provides better visualization of parameter values                                                                                                                      |
| NFR-5 | <b>Availability</b> | Automatic adjustment based on the quality of water like ph level,temperature , turbidity of river water                                                                                                                                                   |
| NFR-6 | <b>Scalability</b>  | Scalability is a major concern for IoT platforms. It has shown that different architectural choices of IoT platforms affect system scalability and that automatic real time decision-making is feasible in an environment composed of dozens of thousand. |
